## Where The Money Comes From

The several responsibilities noted here are financed from various sources. The major responsibilities of the County Engineer, which have to do with highways and bridges, are financed from the counties' share of the income from motor vehicle registration fees and motor vehicle fuel taxes with some assistance from Federal Highway funds. In only a few instances of specially voted levies and bond issues, are other taxes used to supplement highway used taxes.

The income from the motor vehicle registration fees, after administrative costs are deducted, is returned to the local governmental units on the basis of a statutory formula. Over the last six years the distributed income has averaged approximately: Counties - 71%, Municipalities - 24%, Townships - 5% of the total distribution.

Some counties, townships and municipalities have levied up to an additional \$20.00 license fee on motor vehicles. The income from this is divided between the county which received the income from the rural registrations and the municipalities which receive the income from the municipal registrations, all of which must be spent for highway purposes.

## House Numbering Dept.

How numbers are assigned.

House numbers were assigned by using a system in which four hundred numbers were placed on each mile of road. This assures sufficient numbers for future buildings.

East-West roads, have odd numbers on the north side and even numbers on the south side.

North-South roads, have odd numbers on the east side and even numbers on the west side.

## Duties of the County Engineer

The responsibilities of the county engineer are to plan and program the maintenance and repairs of all roads and bridges on the county highway system and all bridges on the township roads; give advice in solving drainage problems and act as advisor to township trustees when requested. He is responsible for the preparation and revisions of tax maps, and also prepares township, village and school district maps.
